The Challenger

Camper Trailer

The Challenger & Bush Challenger are built tough to last.

The Challengers vacuum bonded roof and walls are constructed from 2mm thick fibre glass inner and outer skins, filled with structural foam - This offers greater strength and excellent insulation properties.

The hot dipped galvanized chassis with pressed hole cross members will ensure that your Challenger remains protected from corrosive elements for many years and also offer protection to under floor wiring & plumbing.

With ample storage on the inside and a large exterior front boot you've room to carry all your family will ever need to 'stay in style' while camping.
